

Case Study: System Solutions

In conjunction with CCTV design and manufacturing company, 360 Vision Technology, Cathexis Europe now offers fast & simple set-up, and full Menu control, including PTZ, and ancillary IR and white LED lights for the Predator and Centurion camera range - via the CathexisVision Video Management Software (VMS) platform.

The product of close technical partnership between the two companies, the benefits of fast and simple camera set-up, seamless integration and advanced functionality have been illustrated by a recent temporary installation by Mongey Communications, for the Dublin 1916 Easter Rising Centenary parade. Delivering security and management surveillance for the event, 360 Vision Technology Predator and Centurion all-in-one PTZ cameras seamlessly integrated into the CathexisVision VMS platform, were used to deliver high definition footage of the parade; to provide an effective overview for security, public safety and the event's safe progression through the capital.

Mark Ross, Director for Cathexis Europe explains: *"With 360 Vision cameras fully integrated into our flagship CathexisVision VMS, simple camera set-up and user-friendly operation for existing or new installations is guaranteed. This minimises installation time whilst maximising system performance, a critical feature when working in public areas, as with the Dublin 1916 Centenary parade. Working quickly to ensure complete*

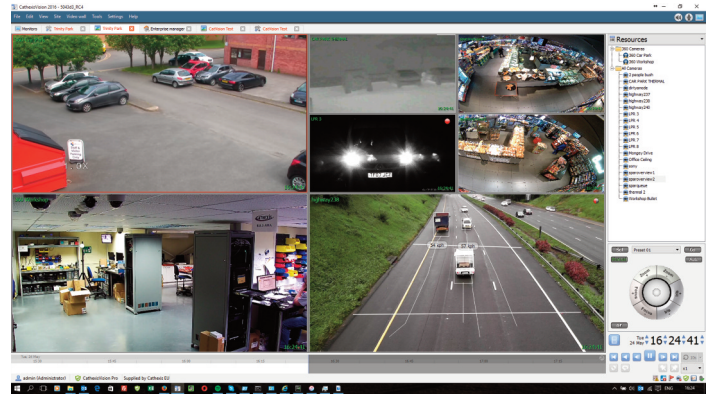

system integration of the Predator cameras before the parade, our close technical relationship with 360 Vision Technology really paid dividends throughout the condensed timescales of this important project, with everything running to plan."

Predator & Centurion

Mark Rees, Business Development Director at 360 Vision Technology added: ***“Right from the design stage of any new product, our R&D team aims to ensure our cameras are the best performing, and the simplest to commission. As an acknowledged industry leader, we aim to partner with like-minded CCTV system control manufacturers. Through this latest partner relationship with Cathexis, we are delivering further technical and surveillance performance possibilities for end-users and installers.”***

The largest ever military parade staged in the Republic of Ireland, watched by tens of thousands of people, the Centenary event included a fly-past by the Irish Air Corps, following a procession including all branches of the Defence Forces, emergency services staff and UN Veterans

through Dame Street and towards the General Post Office on O'Connell Street. The poignant parade passed smoothly through the city, with its participants and the public protected by the combined 360 Vision Technology and Cathexis surveillance solution.
