

Case Study: System Solutions

Promoting their ethos of establishing close technical working partnerships with other leading companies in the security industry, leading UK CCTV design and manufacturing company, 360 Vision Technology, has supported Ogier Electronics to develop simple integration of the 360 Vision analogue and HD/Hybrid camera range into the Ogier Scan-360.

Providing detection of humans and vehicles, Ogier's Scan-360 is a low cost, radar based threat detector with an operational coverage of up to 125,000 square meters. On detection, the Scan-360 skews a PTZ surveillance camera to the target location and provides an alert to the control room. Furthermore, the Scan-360 robust perimeter detection system is available for the cost of little more than a standard PTZ camera.

Initially designed to satisfy the requirements of Europe and the Middle East, today, Scan-360 is used in many varied applications across the world. Cameras from the 360 Vision Technology range can be instantly integrated into the Scan-360 system, or specified as a 'standalone' unit that will include an analogue or HD/Hybrid 360 Vision Predator or Centurion PTZ camera built-in – ready for rapid deployment and instant radar coverage.

This ongoing technical partnership between the leading UK-based technology manufacturers has resulted in simple product set-up, trouble-free integration and situation awareness performance advantages suitable for deployment within a broad mix of general and high-security applications.

and HD/Hybrid cameras**

“Since its launch, the Scan-360 has continued development to enhance its performance in both range and detection, and now represents a highly reliable perimeter intruder detection device suitable for a wide range of applications, including critical infrastructure and asset protection,” says Mark Rainbow, Marketing

Director at Ogier Electronics. *“Thanks to our close working partnership with 360 Vision Technology, we’ve successfully integrated a number of 360 Vision’s analogue and HD/Hybrid PTZ cameras, to allow either Camera Control on Target Detect (CCTD) or Alarm on Target Detect (ATD) capability using the Scan-360.”*
