

Case Study: System Solutions

Thanks to a close technical relationship with leading UK CCTV design and manufacturing company 360 Vision Technology, Visual Management Systems have developed integration and control for the full range of 360 Vision cameras.

Founded in 1996, Glasgow based Visual Management Systems are a leading provider of bespoke PSIM security systems solutions for customers in the UK and overseas, both directly and through OEM partnerships with other leading technology companies.

Visual Management Systems' Titan Vision is an open platform Physical Security Information Management (PSIM) and the product of relentless development and seamless integration in security systems installed across a wide variety of vertical market applications.

Titan Vision PSIM can integrate disparate security equipment into a single management system – providing complete visibility, configuration and control of all systems. This capability can increase control room efficiency via response automation,

workflow management, comprehensive auditing and reporting – all while ensuring ease of installation and operation, usability and cost-effective future proofing.

Providing full integration to 360 Vision Technology's industry leading range of cameras, end-users can maximize their surveillance camera imaging performance, in addition to Titan Vision's intuitive control.

Via an ongoing technical partnership with 360 Vision and the use of 360 Vision's SDK codec, any 360 Vision camera can be simply connected to a Titan Vision network, with minimal set-up – reducing installation time and instantly integrating the extensive functionality of any 360 Vision camera.

Titan Vision is currently employed in varied applications across the UK, while critical infrastructure installations in EMEA are planned –

with applications ranging from people counting, to process control and infrastructure security.

“Our technical partnership with 360 Vision means greater functionality of the 360 Vision camera range for operators,” says John Downie, Sales Director, Visual Management Systems Ltd.

“This ensures our end-user customers benefit from the best possible simple and intuitive control, and seamless systems integration.”
